Acceptance Testing

Unit Testing

- Testing units will include each component in our app.
- Including:
 - Pumpkin component on the volunteer side
 - Stencil entry on the admin side.
- Testing the image classification accuracy.
- Tools: TensorFlow, Jest.

Interface Testing

- Testing each API endpoint for their existence and intended responses to input.
- Test each endpoint as they are created.
- Run at the start of each deployment in development and production.
- Tools: Jest.

Integration Testing

- Two critical integration paths:
 - Data between the main components are consistent.
 - The AI stencil recognition is acceptable.
- Tools: Selenium, TensorFlow.

System Testing

- Strategy:
 - Updating and maintenance of the stencils by the admins.
 - Preparation for the upcoming events.
 - Searching for and changing the pumpkin status.
 - Viewing the update submission logs and approving the status.
- Tools: React Testing Library, Jest, and Selenium.

Regression Testing

- Re-execute the test cases.
- Add any additional cases to cover the new functionalities.
- Automated through CI/CD pipeline on Gitlab.
- Tools: Jest.

Acceptance Testing

- Will be done bi-weekly with our client.
- Putting our app into production and deep testing the process and workflow start to finish.
- A trial run of the event will occur.
- Our team will be available on site to solve any problems that arise.

Frightful and Delightful,

it's a
big

thank you!
